

## Procedures for Connecting to wireless LAN for Education (edunet)

# For Android

OKyushu University provides its faculty, staff and students with a wireless LAN access service that is available in the university.

### OUser

Those who are allowed to use this service are faculty, staff and students of Kyushu University only.

- Students (Undergraduates and graduate students)

To connect to the wireless network, use an account of the Education Information System (Student ID, password) which is assigned at university entry.

For "Account of the Education Information System", see <http://www.iii.kyushu-u.ac.jp/ec/>.

- For faculty and staff: Use Single Sign-On Kyushu University ID (SSO-KID) and password.

For "SSO-KID", see <http://sso.kyushu-u.ac.jp/>.

### ORequirements for connecting to the wireless network

(i) A device running Android

(ii) Wi-Fi capability (Built-in or external (LAN card, etc) Wi-Fi module)

- \* The above wireless LAN device shall support IEEE 802.1X authentication PEAP/MSCHAPv2 as well as WPA/WPA2 security mode.

### OPrecaution for use:

(i) Be sure to take the following security measures.

- Software updating
- Installation of antivirus software and an updated virus definition file and virus scanning on a regular basis

(ii) Compliance with the copyright law on internet use

In order to ensure the compliance with the copyright law on internet use, Kyushu University prohibits the use of file sharing software (Winny, LimeWire, eDonkey, emule, Xunlei, KuGoo, etc). Illegal downloading/uploading of music and videos from/to the internet is regarded as an act of piracy, which may lead to serious matters.

(The use of file sharing software is always monitored by the university's detection system and copyright association.)

(Network Security, Information Infrastructure Initiative)

<https://www.sec.kyushu-u.ac.jp/sec/p2p/p2p.html>

This procedure describes how to connect the device with Android standard functionality to the wireless LAN.

If it is necessary to use software or other accessories bundled with a wireless LAN card for the connection setup, see setup manual of your device.

## Step 1. Creating a Network Profile and Setting up the Connection

### OCreate a network profile.

- 1) Select [Option Button] > [Settings] > [Wireless & networks] and then check [Wi-Fi] to turn it on.
- 2) In [Wireless & networks], select [edunet] to connect to it. Type or select the information as follows:
- 3) Phase 2 Authentication → MS CHAPv2  
Certificate Authority → N/A  
Client Certificate → N/A
- 4) ID → ID@edunet  
Anonymous ID → ID@edunet  
\* For ID, enter SSO-KID, student ID or Student SSO-KID. For student :  
Enter [Student SSO-KID] if you admitted in 2014 or later.  
Enter [Student ID] if you admitted in 2013 or earlier.
- 5) Wireless LAN Password → SSO-KID password  
※Please contact me when you do not know  
"Student SSO-KID" or "Student ID" which to be input.
- 6) Select [Connect].
- 7) When you are connected to the network, "Connected to edunet" appears on the Wi-Fi settings screen.
- 8) Open a web browser to make sure that you are now able to be connected to the Internet.  
If the connection is not successful, turn Wi-Fi off and on.

### [Note]

Some devices may not support EAP/IEEE 802.1X authentication method, which is required for connecting to edunet.

Basically Android devices with version 4.0 or higher support it, but the connection by product has not been confirmed.

Possible causes of connection/authentication failure are described below.

## For Android

Cause	Action Required
Security and/or authentication settings are incorrect.	Go back to 3) of Step 1 and reattempt the procedures.
The user ID and/or password you entered are incorrect.	(i) The combination of the user ID and password is incorrect. Check whether the user ID and password you enter are correct in the Login Test site: <a href="https://sso.kyushu-u.ac.jp/LogDemo/">https://sso.kyushu-u.ac.jp/LogDemo/</a> If the authentication is not successful, see instructions at the following website: <a href="https://sso.kyushu-u.ac.jp/faq.html">https://sso.kyushu-u.ac.jp/faq.html</a> Q5. "I forgot my password."
Wireless LAN controller software is activated.	If a manufacturer's wireless LAN controller software is running, the network connection may not be successful. Check the task tray at the bottom right of the screen to see whether the software is running or not. If yes, close it and then reattempt the connection.

If you are still unable to be connected to the network after taking the above-mentioned actions, contact the following:

**For inquiries about our wireless LAN access service, please contact: Information Technology Infrastructure Division, Department of Information Systems, Kyushu University**
